Exploration Technology Priorities

Strategic approach

- Transfer of new exploration and undersea research technology into applications
- Focus on testing/transfer of TRL 6+ ocean exploration technology
- Encourage partnerships for expertise and cost-sharing

| | Capability gaps |
|----|---|
| 1 | Advanced sampling techniques and sensors |
| 2 | Power/batteries |
| 3 | Telepresence-enabled exploration and research |
| 4 | Under-ice exploration and sampling |
| 5 | Hadal > 4000m exploration and sampling |
| 6 | Advanced video imaging and processing (3D, mosaic, recognition) |
| 7 | Undersea vehicle autonomy and swarm behavior |
| 8 | Telemetry (through-water data transmission) |
| 9 | Ocean exploration data management technology |
| 10 | Outreach and engagement pathways |

OER Technology Investment Mechanisms

- Annual Federal Funding Opportunity
- Cooperative Agreements
 - Cooperative Institute for Ocean Exploration
 - Cooperative Institute for Ocean Exploration Research and Technology
 - Ocean Exploration Trust
 - Global Foundation for Ocean Exploration
- Interagency Partnerships NOPP
- Cooperative Research and Development Agreements (CRADA)
- Small Business Incentive Research Program (SBIR)

Ocean Mapping XPRIZE - NOAA \$1M Bonus Prize

Ocean Exploration and Research

OceanExplorer.NOAA.gov

National Ocean Partnership Program

- NOPP Broad Agency Announcement (BAA)
 - ONR leads BAA process; Contributes \$6-8M
 - NOPP Agencies define solicitation topics
 - Partners bring money or other resources
- NOPP Agencies Partner Outside BAA Process
 - Partners agree on projects and level/type of support
 - Partners are generally federal and non-federal

Autonomous systems to get us there

\$3M advancing autonomous mapping in the deep ocean

- OER leveraged \$1.5M of OAR NOPP funds
- 3 awards, three different platform types

Ocean exploration in three dimensions: advancing water column exploration

Amanda Netburn, PhD

Water column identified as gap

OE early focus on seafloor geology and biology

2013 and 2015 OE forums: water column identified as gap in program

OceanExplorer.NOAA.gov

Ocean Exploration and Research

Why explore the water column?

- Largest inhabitable volume on the planet for multicellular life
- Important to: marine food webs, carbon sequestration, nutrient cycles, heat transfer

Haddock et al. 2017

OceanExplorer.NOAA.gov

Why explore the water column?

- Gelatinous animals and behaviors are poorly observed by traditional means (e.g., trawls)
- Observations are rare throughout most of the ocean

2017 Water Column Workshop

47 participants25 institutions and programsMultidisciplinary and international

Ocean Exploration and Research

Workshop Outcomes

- 1. Review of past efforts
- 2. Identified unanswered questions
- 3. Recommendations
 - a. Geographic priorities
 - b. Community building
 - C. Opportunistic data collection
 - d. Technology development- Animals as sensor platforms and as sensors, Moorings for long-term monitoring (temporal recon), Autonomous systems to cover ground

5. Department of Consumerce Intional Dowanic and Association: Administration Iowanic and Association: Research Iowan Exploration and Research

Data Gaps - Identified through community recommendations

Literature review conducted of published community reports synthesizing deep-ocean data needs

Ocean Exploration and Research

OceanExplorer.NOAA.gov

Data Gaps

- A list of observation types was compiled meeting the following criteria:
 - A deep-sea observation was identified as critical to measure
 - That measurement is not currently collected by OER
- Reports were also assessed for overlapping measurements (i.e. a measurement appeared in more than one report).

Data Gaps

- Total: 53 data gaps identified
- Ten data gaps were identified in three or more community reports

| îĭí | DATA G | APS | | | | | | | | | |

Feasibility Assessment

- Used to evaluate the feasibility of incorporating new measurements, instruments, or processes into OER standard operations to fill data gaps
- Assessments are completed in consultation with experts in that field

Feasibility Assessment

- Background and justification
- Relevance to NOAA and OER missions/strategic goals
- Materials
- Methods
- Cost
- Personnel
- Time
- Data management, processing, accessibility, summaries
- Permitting
- Environmental risk

Feasibility Assessment: eDNA

- Equipment to collect water samples and lab space on the EX is adequate for filtering samples.
- Personnel time and identifying a repository to store the samples or conduct the analysis remain challenges.
- Team is making recommendations based on the assessment.
